Lefty is our go to bull for heifers. Low birth weight, growth and eye appeal all in one package. Last year we kept a Lefty son back to continue that lineage. Kaat is a sure fire heifer bull with a top 5 marbling score and some frame. Nice package.

Abundant is probably not a sure fire heifer bull because this low birth weight is not what his sire does best. However it is what his mom did well. When I line breed home raised sires, I usually get pelvic and big nuts. He is no exception.

The final Epic bull in the group and like his siblings has plenty of marbling. He was injured right after weaning that may have affected his performance. But his mom has already calved to a clean Epic son with a 74 pound bull calf for next years sale.

How the sale works

Each bull will have a price set before the sale. They will range from \$2500 to \$3500.

During the open house time of 11:30 till 2:00 feel free to examine the bulls and eat dinner.

During that time get a buyers number and let the girls know which bulls you are interested in.

You may check the master list at any time during the open house. At 2:00 we will

announce that we are ready for the auction, at that time you need to finalize your selections.

We will start with the highest priced bulls, if more than one buyer is interested in a bull we will have an auction in \$25 dollar increments till the bull is sold. After a bull sells we will ask the new owner

if he is done buying, if so I will remove his buyer number from any of the other bulls he had selected.

If you are the only one on a bull, you will have the option of taking that bull or passing.

You will not go home with more bulls than you need.

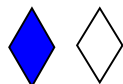

The auction usually takes 45 minutes to an hour.

Parker is the sire of Riley's steer, who at 16 months at county fair, weighed 1792 and was the top gaining steer in the county. Kion's dam is the grand dam of 926 on the previous page. Performance is bred into this calf with a moderate birth weight.

522 has a full brother to Bunga that weighed in at 84 pounds, so I believe, in spite of being a twin, he will work on virgin heifers. More moderate type of heifer bull to tone down some females that are pushing the envelope for size.

This Deliverance son is a top 5 gaining bull like his brother, 901. Difference is that this one I am very comfortable to use on virgin heifers. His top 5 marbling score and nice ribeye per 100 make him a well balanced choice. He has the same look too.

Bankroll is a bull to use on virgin heifers that has some stretch and eye appeal. The most important fact is the fertility that is stacked in his pedigree. His mom calved 2 days sooner than last year as a second calver. Pretty impressive.

Cavalry is an attractive, well balanced bull that keeps getting better. No excuses except that he is taking his time in getting there. Sterling daughters usually knock it out of the park. He was used to follow an AI program in a 4-H herd.

Some things you should know about these cattle:

- 1) These bulls were fed on a ration that never exceeded two pounds of corn per 100 pounds of body weight per day per bull plus corn silage. We feel that it is more important to grow bulls that will go out and breed cows and return home looking like they should. Feeding them at the house in bigger pens and more exercise did drop our gains but we believe will make for better bulls for you. Fat bulls are pretty when you buy them but never again.
- 2) The carcass data on these bulls is presented as close to reality as possible. Please use the marbling scores only for in-herd comparisons. Since 1985 we have collected carcass data on every steer we have raised. We have even gone out and bought calves from our own bulls and fed them out. Our 5 year average of **94%** choice or prime speaks for itself and includes every calf not kept as a bull or replacement female.
- 3) Our goals are to produce bulls that will sire females that will make excellent replacements and steers with enough performance to weigh 1200-1400 pounds at 12-14 months.
- 4) In the past our cowherd has shown enough fertility that our calf crop is 80%-90% A.I. sired. This fall we were at 90.2% pregnant and so far we are at **52%** of our calves were born within **21** days of our first due date. Fertility is the number one ingredient in profitability in a cow/calf program. I think this shows in the scrotal circumferences of these bulls and will show in their daughters.
- 5) This cowherd is not a pampered cowherd. We expect these cows to calve unassisted, get the calf up, and raise it on grazed forages as much as possible. Very few calves are born in the barn and of those fewer are assisted in anyway. That is the cow's job.

6) We will keep the bulls until the first to middle of April at no cost to you. We will deliver the bulls to you at that time. All bulls will be semen checked and ready to work. If any bull has a problem in the first year, we will replace him or refund your money.

HOW THE SALE WORKS:

Each bull will have a price before the sale. They will range from \$2500 to \$3500. During the open house of 11:30 till 2:00 feel free to examine the bulls and eat lunch. During that time get a buyer's number and let the girls know which bulls you would like to bid on. The list is open to inspection at any time. At 2:00 we will announce that the auction is about to start and make your final selections. We will start with the higher priced bulls, if more than one buyer is interested, we will have an auction between the interested buyers. After a bull sells the new owner will be asked if he is done, if so, we will remove his number from the other bulls. If you are alone on a bull you have the right to hold him till the end of the auction or pass. You will not go home with more bulls than you need.

Thank You,

for attending our sale.

We hope by attending, you will take something home with you that will help you meet your goals for the future.

Whether it be a bull, or just some information that you picked up here, either from us, or another customer.

Thanks Again
